Heating capacity	110 – 240m3
Material	Steel
Warranty	2-year warranty
Combustion technology	Balanced flue gas system
Flue exit	Top
Remote control	Yes
Label	Balanced flue gas

PRODUCT DESCRIPTION

The Kratki gas fireplace range pairs sleek and contemporary design with the most modern technology in gas fireplace combustion. These specialised fireplaces are manufactured with thick, high quality steel and are designed to conform to strict EU standards and regulations. Most importantly, the balanced coaxial flue pipe design ensures user safety by creating a fully sealed and safe system.

Each unit boasts a sizeable glass window that provides a beautiful view of the gas flames once lit. For improved safety and performance, as well as an increased lifespan, the heat-resistant glass that Kratki uses is of the highest quality. The gas fireplaces also come with a set of premium, ceramic logs that are beautifully designed to create a more realistic ‘wood fire’ effect when burning.

With very impressive technical specifications, this gas fireplace is an excellent heating solution for anyone looking for a high-performance, modern, closed-combustion gas unit.

The gas system works on both radiant and natural convection and, because the Kratki gas units are battery powered, they do not require electricity. As an efficient, closed-combustion fireplace, the heat generated while burning is released more effectively into the room for your comfort.

All the gas fireplaces in this range come with a dedicated LCD remote for easy control of the unit.
